Crux Cybernetics' QuickStart TeamFrame implementation package

Overview

Many companies are seeking to achieve workforce productivity and project outcome improvements by integrating best process with best practice. To-date these concepts are often disconnected, leaving companies with good process definition and good operational practice, but with no reliable or efficient way to constantly improve the way in which they work.

To take your company to the next level of operational control and response, a collaborative and flexible template approach can be used. This will refine and integrate project, programme, and initiative best practice and enable more effective and synchronised response to change.

Crux's TeamFrame solution improves management performance

TeamExpress

To ensure TeamFrame meets your organisation's current and future needs, Crux proposes working closely with you over a 30 day period to better understand your current work environment and to ensure the TeamFrame application suite will be correctly deployed.

Outcomes

The *TeamExpress* implementation package is designed to deliver the following enterprise project and distributed workforce management benefits:-

- Understanding of your company's collaborative project management needs
- Identification and definition of important project and job processes
- Analysis of organisational readiness to implement process change and recommendations
- Project initiation and start-up management with company wide visibility
- Staff training and collaborative Project Management tool exposure at executive, project manager and worker level
- Understanding of TeamFrame key benefits, such as:
 - efficient workforce task allocation
 - process standardization and improvement
 - skill needs forecasting and matching
 - straight-through timesheeting and project progress reporting
 - external resource project collaboration
 - operations governance and transparency
 - formal, best practice knowledge driven risk management
- Identification of information flow gaps and bottlenecks
- Return on Investment (ROI) analysis
- Pilot outcome summary and organisational readiness evaluation
- Rollout proposal including change management strategy

Description

Crux Cybernetics will spend 5 days on site working with you. You will select a project and identify resources, skills and provide a plan for project completion. Crux will work with you through ROI targets and identify required TeamFrame pilot outcomes. Crux will make available a 10 user ASP hosted customer account (activated for 30 days) that can be accessed from any computing device with Internet access (for PDA devices only Windows platform is currently supported). Crux will work with you to capture project details into TeamFrame, allocate work to project resources, and assist (where necessary) in managing the project. All data can be extracted and returned to you in Microsoft Project XML format should you decide not to continue with the TeamFrame implementation.

This hands-on deployment and use of TeamFrame is designed to ensure there is a good fit between TeamFrame characteristics and customer needs and will ensure the various aspects of collaborative distributed project management are well understood by you and your team.

Cost

\$6,600 (incl. GST).
